How to Tune Prime in on Your DishTV S9000

Go to **Main Menu>Installation>Channel Scan** (At the bottom of your screen you should have Strength and Quality bars)

Make sure the **Satellite** is set on **OptusD1** and you have Quality.
Press **OK** on **Frequency** and set to **12456/22500/H** (It should be 18 in the list)
Set **Scan Type** to **FTA**
Leave **NIT** Search on **No**
And finally **Scan Mode** on **TP**

Then press the **Green** button.

The unit will now scan in any Free-To-Air channels you don't already have.
Prime will most likely appear on the end of you existing channels.
You can organize the channels now if you wish.
